

THE SWAMP WHITE OAK

(*Quercus bicolor*)

- Found in north-central and north-eastern American forests
- Rapid growing, medium deciduous tree
- Grows to 65'-80' tall for 300-350 years
- Very large range, and can survive in a variety of habitats
- Bark resembles the White Oak
- Grows under conditions of poor drainage in marshes, swamps, or seepage areas
- Not found where flooding is permanent, although it is usually found in broad stream valleys, low-lying fields, and the margins of lakes, ponds, or sloughs
- In autumn, they turn brown, yellow-brown, or sometimes reddish. Generally, the color is not as reliable or as brilliant as the White Oak can be.
