

THE SHAGBARK HICKORY

(*Carya ovata*)

- Found in eastern, central, and part of southern American forests
- Slow growing, medium deciduous tree
- Usually grows to a height of 60'-80' tall with a canopy spread of 40'
- Begins producing nuts within 10-12 years of maturity
- As a member of the walnut family, they provide edible nuts for humans and animals
- Average lifespan is approximately 200 years
- Bark appears pulled back and provides great habitat for bats
